Respiratory Health in the Workplace

Recognising, Monitoring & Protecting

Friday, 13 November 2026 | Online or in-person

Silicosis and other occupational lung diseases are rising in NSW.
You're on the frontline of detection.

**An occupational dust diseases fundamentals training program
For GPs, occupational health and respiratory health professionals.**

What you will gain

- Screening and monitoring** Confidence to screen and monitor across high-risk industries.
- Hazardous dust recognition** Recognition of key hazardous dusts, particularly silica and asbestos.
- Legislative clarity** NSW legislative requirements, clearly explained.
- Best-practice frameworks** Best-practice frameworks for consistent respiratory health screening, including practical application of the recently updated National Guidance for doctors assessing workers exposed to respirable crystalline silica.
- Expert insights** Insights from leading occupational and respiratory medicine experts.

New national guidance released

The Australian Centre for Disease Control has published updated national guidance for doctors assessing workers exposed to respirable crystalline silica dust (May 2026). This training will help you put that guidance into practice.
