Deprescribing unpacked: tools, tips and tough cases

SUPPORT-Meds webinar

Approximately one in ten medicines used in primary care is estimated to be inappropriate, and around half of older Australians are exposed to at least one high-risk or unnecessary medicine. Deprescribing offers an opportunity to reduce this burden, but it can be challenging to implement in routine practice.

Who should attend? GPs, pharmacists, nurse practitioners, nurses and other health professionals working in primary care in Australia.

What will be discussed? This session explores practical approaches to safe, person-centred deprescribing including:

- Clinician and consumer resources
- Demonstration of a new digital tapering calculator
- Expert panel discussion of a complex patient case

Date: 30th November 2026

Time: 7-8pm AEDT

Cost: Free
